

Objective of the session :
Handling structures.

1 CD-library

Write a program that allows you to enter information about music albums. This information will be stored in a file and read from it. The information to store about the albums is : name of the author or group, name of the album, list of songs, year of release, musical genre. The program must allow the management of a set of albums : add an album, show the information about all the albums, load the list of albums, and save it.

1.1 Global design

Exercices

1. Define the required data types ;
 2. Perform the top-down analysis of the program
-

1.2 Detail design

Exercices

1. Write the algorithms of the subprograms.
-
